SNOMED CT implementation: Implications of choosing Clinical findings or Observable entities

Anne Randorff Rasmussen

Department of Health Science and Technology, Medical Informatics, Aalborg University, Denmark
Project departure

Vision:
- Data is **specific** and **complete**.
- Data is **accessible**.
- Data is **structured**, so they are easier for others to **understand and reuse**.
- Data can automatically be **extracted** for reporting to national registries, etc..

4 hospitals on 11 sites

One common EHR-system

</table>

...representing a question or procedure which can produce an answer or a result.

...represent the result of a clinical observation, assessment or judgment.

### Eye/vision observable:

- Normal vision finding
- Abnormal vision finding

References: www.ihtsdo.org
Objective

- Exact concept semantics?
- Facilitate data retrieval

Physical examination

- Eye/Vision:
- Oral Cavity:
- Ear:
- Nose:
- Neck:
Method

<td>0 %</td>
</tr>
</tbody>
</table>
Applying Clinical findings instead of Observable entities will have implications for the use of data with respect to:

– Coverage of clinical expressions
– Possibilities for data-retrieval based on
  • Hierarchical composition
  • Defining characteristics
Discussion

Ambiguous use of SNOMED CT can be an issue

Guidelines for consistent use of SNOMED CT is essential for facilitating reusability of data

For all times there will be place for terminological improvement

SNOMED CT implementation should be approached with respect to the content and structure SNOMED CT has today
