Review Questions MiniModule 1:

1. What were the most general types of injuries we did talk about today?

2. How many and which different ‘perspectives of injury’ did we cover today?

3. How can we separate injuries from a biomechanical and a clinical point of view?

4. How can injuries be classified?

5. What is a bone fracture and how can we differentiate between different types of fractures?

6. What are strains and sprains as types of injury?

7. What is the difference between a dislocation and subluxation?

8. Which of the questionnaire questions was easily quantifiable? Which one was not?
   Come up with at least 3 suggestions to improve the questions in the questionnaire.
   The focus should be to make it easier to transfer into numbers. List/describe advantages and disadvantages of your suggestions.
